ACKNOWLEDGEMENT

The Task Force members on "Identification of Districts for Wage and Self Employment Programmes" met several times to discuss the issues involved in identification of districts and finalise the Report. I wish to place on record my appreciation of the cooperation and support that I received from them. Dr. Gurmail Singh provided the data on agricultural productivity and agricultural wages - district-wise. We are indebted to him as without this input, the exercise would not have been possible. I would also like to thank Shri Lalit Mathur, Financial Adviser (MoRD) who attended many of the Task Force Meetings and made fruitful suggestions and my colleagues in the Planning Commission, especially Dr. Pronab Sen, Adviser (PPD) and Shri V. Laxmiratan, the then Principal Adviser, State Plans Division who provided valuable inputs. Shri Sunil Saran, Senior Research Officer, Planning Commission worked tirelessly and took over the responsibility of data collection, tabulation and analysis. Dr. A. Mohan, Senior System Analyst & HOD DISNIC of the National Informatics Centre helped in data analysis. Their contribution is greatly appreciated.

(ROHINI NAYYAR)

Chapter - I

Introduction

The Planning Commission had set up a Working Group and a Steering Committee on Rural Poverty Alleviation Programmes for formulation of the Tenth five-year plan. The Working Group reviewed schemes for self-employment, wage-employment and other programmes for poverty alleviation and submitted its recommendations to the Steering Committee. The Working Group was of the view that wage employment programmes were not needed in all the regions. There was a need to implement public works programmes that generated wage employment in lean agricultural season only in those districts where employment opportunities for wage labour were limited. The working group stated that:

There should be better targeting of the districts for the wage employment. Wage employment programmes are not needed in all the regions. There is a need to focus these programmes in limited areas. Programmes focusing on (wage) employment should cover only the backward and poor districts where there is demand as well as supply of labour. Such districts can be selected on the basis of some set norms.

The recommendation of the Working Group was also endorsed by the Steering Committee. Pursuant to the recommendation of the working group, the Ministry of Rural Development set up a Task Force in August 2001 to identify districts for wage and self-employment schemes headed by Dr. Rohini Nayyar, Adviser (Rural Development) Planning Commission. The composition and the Terms of Reference of the Task Force are at Annexure I.

The Task Force met several times and deliberated on the parameters that could effectively capture dimensions of backwardness for wage and self-employment programmes. The Task Force also reviewed the work of other Committees set up in the past by the Government for ensuring balanced regional development. The Report is prepared on the basis of the discussions in the Task Force meetings and inputs provided by Members of the Task Force.

The Report is organized in six Chapters. Chapter I outlines the rationale for setting up the Task Force. Chapter II summarizes the methodology adopted by some of the Committees set up in the past for identification of backward districts. Chapter III discusses the parameters identified by the Task Force for selecting districts. Chapter IV describes the analysis carried out for identifying districts for wage employment. Identification of districts for self employment is analysed in Chapter V. Conclusions are presented in Chapter VI.

Chapter - II

Identification of Districts for Balanced Growth

Balanced regional development has been given a very high priority in the planning process. To accomplish development of the backward regions of the country, many schemes and programmes have been taken up by the Centre and the State Governments. Several committees have undertaken identification of backward districts at various points of time. However, the indicators of backwardness were different depending on the priority at that point in time.

One of the first attempts at identification of backward areas was made in the 1960. The Second Five Year Plan had brought to the fore the importance of heavy and capital goods industry as the prime mover of growth. Therefore, the districts, which were identified as backward, were the ones which did not have any major industry. The focus on government initiatives was on promotion of capital goods and heavy industries. Many of these industries were located in backward areas either because of the industrial policies or on account of the fact that raw material for the heavy industries were available in the backward regions of the country. Location of steel plants is a prime example.

The 1960's also witnessed greater attention to the agricultural sector in the country. Drought in the early 1960's and the resultant food crisis almost coincided with the emergence of the green revolution technology internationally. The Government quickly seized the window of opportunity provided by the High Yielding Variety seeds and an elaborate structure that underpinned the spread of this technology to the northwestern parts of the country was put in place by 1965. Food Corporation of India, Agricultural Prices Commission, fertiliser subsidy, and minimum support prices were some of the important ingredients for promotion of green revolution in the country. The technology, which was initially confined to northwest region and wheat. The hyv seeds of wheat spread to other parts of the country during 1970's. Technological breakthrough in rice also took place during this period. By 1975-76, country had attained self-sufficiency in food at the national level. The development of dairy industry in this period also provided increased income opportunities to people in the rural areas.

With the success of green revolution technology, the emphasis on industrial development for economic growth got considerably weakened in the 1980s and the 1990s as it was realised that industrial growth had failed to give a boost to the development of backward areas and the agricultural growth itself could push these backward areas on a high growth path. The Sixth and Seventh Plan clearly recognized that industrial development alone would not eliminate regional disparity and agricultural growth would have to be promoted in the non green revolution areas to accelerate the growth process. As a result, programmes for increasing crop production were launched in eastern and central parts of the country. Special attention was placed on expanding area under irrigation, provision of credit and marketing linkages.

There has been a shift in development paradigm in the last decade of the 20th century from economic growth to human development. Health, education, sanitation and other basic amenities were incorporated in the analysis of backwardness. Governance has become another key concern. Districts have been identified for operating programmes specifically aimed at upgrading the health and educational status of the people. Similarly, National Commission on Population (NCP) set up by the Government in 2000, has identified backward districts on demographic parameters so that family planning programmes could be intensively implemented in these districts to achieve population stabilization.

Most of the Committees set up by the Government in the past for identification of backward districts have followed an index-based approach. These Committees identified variables which captured economic, social or infrastructure status of a district and converted these variables into a single numeraire. The weights assigned to the parameters reflected the importance attached by the Committee to those parameters. The Committees which followed this index-based approach include the Committee on Dispersal of Industries set up by the Government in 1960, the Pandey Committee set up by the Government pursuant to the directive of National Development Council in 1968 and the Sukhmoy Chakrabarty Committee set up by the Planning Commission on backward areas in 1974.

In contrast to the index-based approach, the National Committee on Development of Backward Areas appointed by Planning Commission in 1978 under the Chairmanship of Shri B. Shivraman, identified problem areas as backward for planned development. The problem areas identified by the Committee were:

- Chronically drought prone area
- Desert area
- Tribal areas
- Hill areas
- Chronically flood affected areas
- Coastal areas affected by salinity.

The Government introduced special programmes for development of these areas.

In the 1990's again, three committees identified backward districts for specific programmes on the initiative of the Ministry of Rural Development (MoRD). Jawhar Rojgar Yojna was initiated by the Govt. in 1989-90. After review of the scheme in 1992-93, the Government decided to identify 120 backward districts in different States where there was a concentration of unemployment and under-employment. Extensive public works programmes were to be taken up in these districts for increased employment opportunities. A number of variables were analysed for identification of 120 backward districts but finally two variables, viz., Scheduled Castes / Scheduled Tribe population (1991 Census) and inverse of agricultural productivity per worker were the two indicators which were given equal weightage to develop a composite index.

The MORD also identified blocks in selected districts in 1993 for Employment Assurance Scheme. The objective of the scheme was to provide assured employment to the rural poor residing in the blocks covered by revamped public distribution system. These blocks were located in the remote and backward parts of the country covered under Integrated Tribal Development Project,

Drought Prone Area, Desert Prone Area and Modified Area Development Approach Blocks. Over the years, the coverage was gradually increased and finally it was universalized.

Though the DPAP and DDP programmes were initiated in 1970's, the MoRD set up a Technical Committee under Dr. C.H.H. Hanumantha Rao to identify blocks for operation of DPAP and DDP programmes. The Committee recommended selection of blocks based on moisture index which is defined as:

$$\text{"Moisture Index"} = \frac{\text{Precipitation} - \text{Potential Evapo-transpiration}}{\text{Potential Evapo-transpiration}} \times 100$$

The Committee also recommended that blocks that had irrigation coverage above certain a percentage were to be excluded from the programme ambit. The criteria for inclusion and permissible programme in a block recommended by the committee are presented in the table below :

Table: 2.1
Criteria For Selection of Blocks for DPAP, DDP

M.I. (Moisture Index)	Programme Permissible	Ecosystem	% Irrigated area
< - 66.7	DDP	Arid	50%
-66.6 to -33.3	DPAP	Semi-arid	40%
-33.2 to 0	DPAP	Dry sub-humid	30%

Blocks with higher area under irrigation than those indicated were to be excluded from programme coverage. Pursuant to the recommendations of the Committee, the MoRD identified blocks for inclusion under DPAP and DDP programmes and issued detailed guidelines for execution of DPAP, DDP and Integrated Wasteland Development Project (IWDP) on Watershed basis.

The Govt., under Common Minimum Programme (CMP) announced in 1996 had decided to identify backwards districts for special action plan for infrastructure development. EAS Sarma Committee was set up to identify 100 most backward districts of the country in 1997. The E.A.S Sarma Committee developed a composite index. The Committee considered indicators of deprivation, social infrastructure, economic infrastructure and it assigned different weights to each variable. The parameters and their weights are given below:

E.A.S Sarma Committee: Criteria for Identification of Districts

- Incidence of Poverty (2,6.5,13,19.5,22.5)
- Education (2)

- Health (2)
- Water Supply (1)
- Transport & Communications (2)
- Power and Electricity (1)
- Post Offices / Banks (1)
- Agriculture (3)
- Industry (1)

All indicators, other than incidence of poverty were assigned a weight of 13. The weights for poverty ratio were super imposed for the sensitivity analysis. Five scenario with different weights attached to poverty ratio were worked out. These are presented in the Table 2.2 below:

Table 2. 2
Relative Weights for Sensitivity Analysis

	S1	S2	S3	S4	S5
Poverty Ratio	13.33	33.33	50.00	60.00	63.40
Other Indicators	86.60	66.67	50.00	40.00	36.60
Total	100.00	100.00	100.00	100.00	100.00

Districts that figured in the first 100 districts in at least three scenarios were identified as backward districts. Of the 100 most backward districts identified by E.A.S Sarma Committee, 38 districts were in Bihar, 19 in Madhya Pradesh and 17 in Uttar Pradesh. 10 districts of Maharashtra also figured in the list of backward districts. These districts are largely tribal and fall in arid or semi arid agro-climatic zones. North-eastern States and Jammu & Kashmir were excluded from the analysis as the Committee felt that 'they had problems which were specific and peculiar to them which would require an approach different from those appropriate for the other poor and backward districts of the country.' Sikkim, however, was included in the analysis. No district from Gujarat, Goa, Kerala, Punjab, Andhra Pradesh and Tamil Nadu figured in the list of backward districts. In Uttar Pradesh, none of the districts that form part of the newly created state of Uttranchal figured in the list of the backward districts.

Chapter - III

Criteria for Identification of Backward Districts

Wage Employment Programmes have been implemented in the country from the 1960s. The major objectives of the programmes are to improve the infrastructure in the area so that productive employment in the medium and long term can be generated due to the increased economic activity. In the short-term the programmes provide supplementary wage-employment to meet subsistence needs of the poor; they also raise wages in the area by creating increasing demand for wage labour on public works. By providing employment and income opportunities in lean agricultural season, they also ensure food security for the rural poor. These programmes have been greatly enlarged and upscaled over successive plan periods to meet the needs of the poor, whose numbers have been increasing due to population pressure and inadequacy of the system to provide employment to the growing work force.

This Task Force considered the following parameters as critical for the selection of districts as backward:

- Incidence of poverty;
- Unemployment rate;
- Agricultural wage rate;
- Per hectare agricultural productivity;
- Productivity per agricultural worker;
- SC/ST population;
- Drought-proneness and desert-proneness;
- Rural connectivity.

The Task Force evaluated the data available at the regional and district level. For some variables, data is available only at the regional level. In some cases, data is available only at the district level. In a few cases, though data is available both at the regional and district level, sources of data differ for the regions and the districts. For example, agricultural wage rates are available at regional level from NSSO; however, district-wise wage rates are available only from the Ministry of Agriculture.

NSSO has provided at the regional level data for the 55th round of survey conducted in 1999-2000 on wages and unemployment rates on usual primary status and current daily status basis. Comparable data on the incidence of poverty is, however, available for only the 50th round (1993-94). The regional data was collected and analysed for the following parameters:

- Regional Poverty profile
- Unemployment rate on current daily status (CDS), and
- Wage rates for agricultural labour

District level data was collected for the following variables:

- i) Per hectare agricultural productivity
- ii) Productivity per agricultural worker
- iii) Agricultural wages
- iv) Scheduled Caste / Scheduled Tribe population
- v) Drought prone and desert prone, and
- vi) Rural connectivity.

The Task Force was of the view that incidence of poverty and rate of unemployment were two most critical parameters for identifying districts for wage employment. However, data on these parameters is available only at the regional level. In the absence of this data, the Task Force decided that at the district level variables that captured average income levels would be the most appropriate variables for constructing an index of backwardness.

The following paragraphs describe, in detail, the variables considered by the Task Force and the reasons for their inclusion or exclusion in the computation of the index.

Incidence of Poverty – District-wise incidence of poverty is not available at present. A few attempts have been made by some states to calculate district-wise income. However, this information is not available for all the states and districts of the country. Poverty estimates based on the 50th round of National Sample Survey Organisation's (NSSO) survey are available for 78 regions of the NSSO. Though the samples for NSSO regions are drawn from all the districts within the region, given the small sample size in each district, district level incidence of poverty has not been calculated thus far. The Task Force was of the view that it would not be prudent to use regional incidence of poverty as a proxy for incidence of poverty in a district. {It may be recalled that Sarma Committee did use regional poverty as a proxy for the district-level incidence of poverty.} The data on agricultural productivity and agricultural wage rates available at the district level also support the view that all districts in a region may not have a similar poverty profile. The Task Force, therefore, decided not to use poverty profile at the regional level as a variable for district level analysis. The Task Force felt that district-wise data on incidence of poverty should be generated by the Government as it is a very important parameter for selection of districts or blocks for many schemes of the Government. NSSO and State Statistical Organizations could pool their resources to generate this data.

Unemployment and Wage Rates – Data on unemployment is available from the NSSO only. The region-wise unemployment data is available on current daily status and usual principal status basis. The deficiencies of regional poverty profile enumerated above for district-wise analysis, apply equally to the unemployment data. Secondly, the data do not classify unemployment rates separately for educated and uneducated. Regions or districts with high levels of educated unemployment would not require wage-employment programmes. For example, unemployment rates in Kerala have been reported to be one of the highest in the country in 1999-2000. However,

wage-employment available on public works programmes would hardly be a solution to the unemployment problem in Kerala, as the educated unemployed would not be available for such work. The Task Force, therefore, decided against use of unemployment rate as a variable for this analysis. NSSO also reports data on wage rates by regions. However, these were not considered by the Task Force as district-wise wage rates were available from other sources.

Per Hectare Agricultural Productivity and Productivity per Agriculture Worker – The demand for labour in agriculturally prosperous areas is generally high. Employment opportunities for agricultural labour in districts of high agricultural productivity would be substantial. The need for public works programmes would not arise in such a situation. However, in districts with low agricultural productivity, the employment opportunities would be limited. These districts are also likely to be single crop districts where employment opportunities for agricultural labour would largely be available during the kharif season only. Public works programmes would become necessary in such districts.

The data on agricultural productivity per hectare and productivity per agricultural worker capture the level of agricultural development in a district. Data on agricultural productivity at district level is not available from Ministry of Agriculture. However, the Planning Commission in 1979 had commissioned a study by Prof. Bhalla and Prof. Alagh to analyse the growth performance of the agricultural output at district level. The study was later updated in 1989 by Prof. Bhalla and Dr. Tyagi. This data was used in 1993 to identify districts for Intensive Jawahar Rozgar Yojana (IJRY). Prof. Bhalla and Dr. Gurmail Singh updated the data again in 2001. Production of 35 major crops has been used for calculating the agricultural productivity of the district. Data on agricultural productivity per hectare and productivity per worker pertain to 1990-93 period. The Task Force was of the view that productivity per agricultural worker was a better indicator of the ability of the agricultural system to provide wage employment to the agricultural worker. The lower the agriculture productivity per worker, the lower would be the capacity of farmers to engage hired labour. The Task Force, therefore, decided to use productivity per agricultural worker as an indicator of agricultural performance of a district.

Agricultural Wages – High agricultural wages show high demand for agricultural labour. Again in such districts, there would be no need for a public works programme. Low agricultural wages, however, would indicate a district with low economic activity, poor infrastructure and low employment opportunities. The Task Force was of the view that agriculture wages were a very good indicator of income levels of the rural population in a district. The information on agricultural wages at the district level is available from the Directorate of Economic and Statistics, Ministry of Agriculture. The Ministry of Agriculture compiles month-wise information by four different types of workers. These are:

- Skilled labour (blacksmith and carpenters);
- Field labourers (ploughman, sower, weeder, reaper and harvesters);
- Other agricultural labourers (coolies, diggers, load-carriers, well-diggers);
- Herdsmen

Wage rate in each category and sub-categories is further available separately for male, female and child workers. The Task Force decided to use the information on wages for field workers. Ideally, to work out a weighted wage-rate for field workers, information at district level is required on (i) employment pattern of male, female and child labour by sub-categories of field worker; and (ii)

wage rate for male, female and child labour for all districts. This data for all categories is not available. Therefore, for consistency of information across the districts, the average of monthly and category-wise wages of male workers in each district has been used in the analysis. The source for this data is "The Agricultural Wages in India; 1995-96, 1996-97", A Publication of Directorate of Economic and Statistics, Ministry of Agriculture, New Delhi, published in 2001.

Scheduled Caste / Scheduled Tribe Population – Many Committees that have been set up in the past have used the district-wise SC/ST population as an indicator for identification of districts for different programmes. The Scheduled Castes and Scheduled Tribes population comprise the bulk of the agricultural labour class in the rural areas. Though the number of agricultural labourers in a district would be a more appropriate indicator for selection of districts for wage employment programmes, given the pre-ponderance of Scheduled Castes and Scheduled Tribes population in the agricultural labour class, the Task Force considered district-wise SC/ST population as the most appropriate. In addition, the infrastructure facilities in the districts, which have a concentration of Scheduled Caste and Scheduled Tribe population, are relatively poor. The educational and health status of the SC / ST is also low. The Task Force was of the view that district-wise SC/ST population also indicate the backwardness of an area. The SC/ST population for 1991 census has been considered in the analysis, as 2001 Census figures are not available at present. In any case, the proportion of SC/ST population in a district is unlikely to vary significantly during the two Census periods.

Drought prone & Desert prone areas – As mentioned in Chapter II, drought-prone and desert prone areas have been identified for special attention by the Government. Environmentally, these are more fragile areas of the country. Special programmes for restoration of the lands in these areas have been undertaken. These programmes have been given a greater thrust during the Ninth Plan and Tenth Plan period. The Task Force felt that the density of population in these areas was low and the employment needs of these districts / blocks could be taken care of under the existing programmes. The major problem in these districts was that of the recurrent droughts. In view of the fact that the government to tackle natural calamities has initiated a specific plan of action, the Task Force decided not to give any weightage to DPAP and DDP areas in the identification of backward districts.

Rural Connectivity – The road length in a district is an important indicator of the infrastructure available in the district. District-wise status of rural connectivity is available only for the 1991 census. The Task Force was of the view that in the absence of authentic data on district-wise rural connectivity, it may be prudent to use SC/ST population as a proxy for under developed road network.

In view of the reasons outlined above, the Task force selected three variables for computing an index of backwardness, which could be used for selecting districts for wage employment programmes. These are:

- Agricultural productivity per worker;
- Agricultural wage rate;
- SC/ST population.

It was also decided to use incidence of poverty and output per hectare to carry out sensitivity analysis. The analysis is presented in the next Chapter.

Chapter - IV

Identification of Districts for Wage Employment

The variables that were considered for ranking of districts have been discussed in the previous Chapter. Data on agricultural productivity per worker was available only for 17 States. As a result Goa, all special category States except Assam and union territories were excluded from the analysis. Information on 482 districts was available in respect of 17 States. The Task Force, however, decided to exclude districts with urban agglomerates of over one million population as per 2001 census. The state capitals were also excluded. It was felt that these urban centres would generate economic activities that would obviate the need for public works programmes. As a result, 35 districts were excluded from the analysis and exercise for ranking districts was confined to 447 districts. Annexure II provides information on States selected for analysis and the districts that have been excluded. In most States, the number of districts has increased since 1991 due to bifurcation of the districts. In such cases, the SC/ST population proportion for the original district in 1991 has been applied to the new districts created by the division of the district. Similarly for agricultural wages and agricultural productivity per worker, data for the original district has been used. However, in case of agricultural wages, data on wage rates for a few a districts is not available, in such cases the wage rates of a contiguous district have been used for computing the index.

In the exercise for ranking the districts, both distributional and economic parameters have been used. Scheduled Caste and Scheduled Tribe population is a distributional parameter, while output per agricultural workers and agricultural wages represent average income level parameters. The index was computed for each variable. For agricultural productivity per worker and agricultural wages, the index was computed as under:

$$\frac{\text{Actual Value} - \text{Minimum Value}}{\text{Maximum Value} - \text{Minimum Value}}$$

The lower the index value, the more backward would be the district. In case of Scheduled Caste / Scheduled Tribe population, it is presumed a priori that districts with higher proportion of SC / ST population would be more backward. To ensure that the index values in the three variable moved in the same direction, the index for SC / ST population has been calculated as under:

$$\frac{\text{Maximum Value} - \text{Actual Value}}{\text{Maximum Value} - \text{Minimum Value}}$$

The districts with higher percentage of SC / ST population will have a lower index value.

The three indexes were added to work out the composite index and rank the districts. The

districts with low wages, low productivity and high SC/ST population would be ranked as backward on this index. Annexure III gives ranking of all 447 districts in this study. The Task Force was of the view that 1/3rd of the 447 districts should be considered for wage employment. As such, first 150 districts from 447 districts were identified for taking up intensive wage employment programmes. These districts are indicated in Appendix-I.

Sensitivity analysis by assigning different weights to the three variables was not attempted. Every variable was given a weightage of 33.3 per cent. However, another index with two additional variables was computed to test the robustness of the parameters for selection of backward districts. The second index considered agricultural wages, productivity per agricultural worker, agricultural productivity per hectare, SC / ST population and poverty ratio. As district wise data for poverty was not available, the regional incidence of poverty was taken as a proxy for district data. Equal weights were assigned to all the five variables. For poverty ratio, index is computed in the same manner as it has been calculated for SC / ST population. Lower poverty index value indicates a backward district. In case of agricultural productivity per hectare index has been computed similar to the computations for agricultural wages and output per worker. Lower index value indicates a backward district. The detailed information on 447 districts for 5 variables is at Annexure - IV. An exercise was also carried out to find out districts that were common in both the indexes. 111 districts figured in both the indexes. These districts in a way form the core of the most backward districts in the country. The distribution of districts in both the exercises and the common districts in the two indexes are indicated in the Table 4.1 below:

Table - 4.1
Distribution of Backward Districts

SI	State	Index based on Three Parameters	Index based on Five Parameters	common Districts in Both Indexes
1	Andhra Pradesh	6	-	-
2	Assam	7	7	6
3	Bihar	6	27	6
4	Chattisgarh	15	15	15
5	Gujarat	8	3	3
6	Jharkhand	19	20	19
7	Karnataka	4	-	-
8	Madhya Pradesh	20	22	17
9	Maharashtra	15	18	13
10	Orissa	27	19	19
11	Rajasthan	7	3	3
12	Tamil Nadu	2	-	-
13	Uttar Pradesh	7	13	7
14	West Bengal	7	3	3
	Total - 14 States	150	150	111

The analysis presented above shows that Punjab, Haryana and Kerala do not have any district in first 150 districts, which could be categorized as backward. The results of the sensitivity analysis indicate that if poverty were also to be taken as a criterion for identification of districts, Andhra Pradesh, Tamil Nadu and Karnataka would not have any backward districts as the incidence of poverty in these States is considerably lower than in the other States. In fact, if incidence of poverty were to be considered the distribution of backward districts would largely be confined to central and eastern parts of the country. Even based on the index for three parameters viz; agricultural wage rates, agricultural productivity per worker and SC / ST population, the bulk of the backward districts would still fall in the central and eastern regions of the country.

Chapter - V

Identification of Districts for Self-Employment

The Task Force was also required to identify districts where self-employment programmes could be taken up. Task Force was of the view that self-employment programmes have a greater potential for success in areas, which have good infrastructure facilities. However, the Task Force considered the paradigm shift that was being attempted by the Government and the civil society for promotion of self-help movement in the country. Self help movement has taken firm roots in many districts, some of which have identified for wage employment in the present study. In any district, many of the self-help groups would reach the stage of micro trading and service activity. Some may also reach the stage of micro enterprise. It is, therefore, necessary to provide support to the self-help movement even in poorer districts. Individual beneficiaries are also assisted under self-employment programmes. Even in the most backward districts, there would be families close to the poverty line who could be assisted. In the existing programmes for self-employment, land based activities could be taken up even in the poorest of the poor districts. In the long run self-employment ventures are the only solution to the problem of poverty and unemployment. The Task Force, therefore, decided against identification of districts for self-employment and recommended that self-employment programmes may be taken up in all the districts.

Chapter - VI

Conclusion

The issue before the Task Force was to identify districts where it was necessary to take up programmes for creation of wage employment to provide income opportunities to people in the absence of other avenues of employment. The Task Force was of the view that the parameters which would effectively capture backwardness of an area for initiating wage-employment programmes would be unemployment rate, incidence of poverty, agricultural wage rates, agricultural productivity per hectare and the infrastructure facilities available in the district. However, given the data limitations and data gaps, the Task Force carried out the analysis on three parameters for which reliable data is available. These parameters are agricultural wages; output per agricultural worker and SC/ST population of the district.

The Task Force is of the view that wage employment programmes may be implemented in 150 backward districts, which form the core of under developed areas of the country. These districts are largely distributed in the central and eastern parts of the country. Very few districts from northern and southern States get identified as backward districts. Given the fact that SC/ST population was one of the parameters for identification of backward districts, tribal districts dominate the list of backward districts. It has to be noted that in any exercise for identification of backward districts, which follows an index based approach, there could be some aberrations in the districts identified as backward. However, such aberrations can be taken care of in consultation with the State Governments.

The Task Force was also required to identify districts for self-employment programmes. The Task Force was of the view that in order to promote self-help movement in the country, self-employment programmes may be undertaken in all districts of the country.

Appendix - I

150 Districts Identified for Wage Employment

SI	State	District	Rank
1	2	3	4
1	Andhra Pradesh	ADILABAD	61
2	Andhra Pradesh	KHAMMAM	87
3	Andhra Pradesh	MAHBUBNAGAR	94
4	Andhra Pradesh	WARANGAL	119
5	Andhra Pradesh	RANGAREDDY	122
6	Andhra Pradesh	CHITTUR	145
7	Assam	NORTH CACHAR HILLS	24
8	Assam	KARBI ANGLONG	42
9	Assam	KOKRAJHAR	59
10	Assam	DHEMAJI	60
11	Assam	NORTH LAKHIMPUR	91
12	Assam	BONGAIGAON	105
13	Assam	GOALPARA	132
14	Bihar	GAYA	104
15	Bihar	VAISHALI	112
16	Bihar	SAMASTIPUR	120
17	Bihar	SHEOHAR	121
18	Bihar	JAMUI	141
19	Bihar	NAWADAH	142

Sl	State	District	Rank
1	2	3	4

Distribution of 150 Backward Districts-State wise

No. 25011/1/2001/SGSY.III
Government of India
Ministry of Rural Development

Krishi Bhavan, New Delhi,
Dated 3rd August, 2001

Subject : Task force to identify districts for programmes of Wage Employment and Self-Employment

It is proposed to set up a Task Force to identify districts separately for wage employment and self-employment programmes.

2. The composition of the Task Force will be as under:
- | | | |
|-------|---|-------------|
| (i) | Dr. Rohini Nayyar, Adviser (RD), Planning Commission, New Delhi.
Tele: 23096592 | Chairperson |
| (ii) | Prof. Indira Hirway, Director & Prof. of Economics, Centre for Development Alternatives, E-71, Akash, Near Chief Justice Bunglow, Bodakdev, Ahmedabad.
Tele: 079/6852850 | Member |
| (iii) | Dr. S. Mahendra Dev, Director, Centre for Economics & Social Study, Nizamiah Observatory Campus, Begumpet, Hyderabad.
Tele: 040/6570480 | Member |
| (iv) | Dr. Ravi Srivastava, Prof. of Economics, Centre for the Study Regional Development, Jawaharlal Nehru University, 1328, Poorvanchal, JNU Campus, New Delhi.
Tel: 011/26185829 ®, 26107676 (O) | Member |
| (v) | Prof. Gurmail Singh, Economic Deptt., Chandigarh (Punjab). (Res. 3383 Sector 15 D, Chandigarh)
Tele: (O) (0172) 779140 & ®.783196 | Member |

(vi) Shri Nagesh Singh, Director (RD), Planning
Commission, Yojana Bhavan, New Delhi.
Tele: 011/23096544

Convenor

3. The Task force will undertake identification of the districts separately for wage employment and self-employment programmes in the same manner as the Districts have been identified under the Desert Development Programme (DDP) and the Drought Prone Area Programme (DPAP) for specific purposes of drought proofing etc.

4. The Task Force will submit its final report immediately.

Sd/-
Srikara Naik
Director (SGSY)

Distribution:

- (i) Chairperson of the Task Force
- (ii) All Members of the Task Force

Copy also to:

- (i) PS to Minister of Rural Development, Govt. of India
- (ii) PS to Minister of State for Rural Development (M)
- (iii) PS to Minister of State for Rural Development (V)
- (iv) Sr PPS to Secretary (RD)
- (v) PS to AS&FA
- (vi) PS to JS (LR)
- (vii) PS to JS (PA)
